

System Test Procedure

1. Account creation has worked after inputting various information needed, and user is asked to login every time they visit the site. (Requirements 1 – 3).
2. Business questionnaire while creating account works properly. (Requirements 4 – 5).
3. After account creation the next questionnaire about the business' information works fine and updates the website. (Requirements 6 – 8).
4. Both sections are available to view on site. (Requirement 9).
5. Product section gives users the option to input products without any issues. (Requirement 10).
6. Stock information was tested with a product and displayed when needed. Hot product sign is still being worked on. (Requirements 11 – 13).
7. Storage room is being worked on now, so testing has not started for that. (Requirements 14 – 16).
8. Admin email was tested and worked properly. (Requirement 17).
